SUMMARY

Backend Software Engineer with experience building **scalable APIs, distributed systems, and data pipelines** using Python, Java (Spring Boot), and cloud technologies (AWS). Proven ability to **optimize performance (100%+ improvement), design microservices, and deliver production-ready systems**, with a strong interest in **AI/LLM systems and data engineering**

TECHNICAL SKILLS

- **Languages:** Python (FastAPI), Java/Groovy (Spring Boot), SQL, JavaScript (Next.js, React), Go (Golang), CPP
- **Backend & APIs:** REST APIs, Microservices, Distributed Systems, API Design, System Design
- **Data Engineering:** ETL/ELT, Apache Airflow, Data Pipelines, Data Modeling, Elasticsearch
- **Cloud & DevOps:** AWS (S3, Redshift), Docker, Terraform, CI/CD, GitHub Actions, Linux
- **Databases:** PostgreSQL, MySQL, Redis, NoSQL concepts
- **Tools:** Git (GitHub, GitLab), Postman, Jira, Confluence, VS Code, IntelliJ, PyCharm, ruff, uv
- **Other:** Agile/Scrum, Testing & QA, Debugging, Performance Optimization, OOP

PROFESSIONAL EXPERIENCE

Backend Software Engineer

Jan 2025 - Dec 2025

NGS - Mekong Security Tech Branch

Hanoi, Vietnam

- Designed and implemented **high-performance REST APIs** using FastAPI for a **nation-scale real-time monitoring system**, supporting large-scale data ingestion
- Built and orchestrated **distributed data pipelines using Apache Airflow**, enabling asynchronous processing and improving system scalability
- Optimized **PostgreSQL queries and schema design**, improving performance by **120%** for large datasets
- Integrated **Elasticsearch for advanced querying**, significantly improving search speed and data retrieval efficiency
- Developed **object storage solution using MinIO (S3-compatible)** for scalable media handling
- Implemented **Redis caching**, reducing API response time by **60%** for high-demand endpoints
- Collaborated in a **15-engineer Agile team**, contributing to system design, debugging, and production deployment
- Company link: <https://ngs.com.vn>

Backend Developer Intern

Oct 2024 - Jan 2025

Techlead

Hanoi, Vietnam

- Built and debugged **Odoo-Jira integration tool**, using Java and Spring Boot, improving workflow automation and data synchronization
- Conducted **unit testing and troubleshooting**, ensuring reliability across system integrations

PERSONAL PROJECTS

LMIA Distribution Interact Map (Full-Stack + Data Pipeline)

Github link: <https://github.com/vietanhphung/lmiaMap>

- **ETL** data from Canada.ca API into MySQL (CSV, JSON, XLSX)
- Created an interactive map using **Flask** and Google Maps API, visualizing LMIA distribution trends
- Added filter features for enhanced data analysis; optimized Bash commands with Make

Automated ETL Data Pipeline for Air Crash Investigation on AWS

- Github link: <https://github.com/vietanhphung/E2E-AirCrashInvestigation>
- Scraped and processed air crash data using BeautifulSoup, stored in **AWS S3**
- Built infrastructure with **Terraform**, orchestrated with **Airflow**, and containerized using **Docker**
- Secured pipeline with AWS IAM policies and simplified Bash commands with Make

EDUCATION

Master of Computer Science (Expected June 2027)

University of Texas at Austin

Bachelor of Computer Science (Honors, Distinction)

Toronto Metropolitan University

- Dean's list | Renewable entrance scholarships
- Relevant Courses: Software Engineering, Data Structures, Database Systems, Algorithms, AI, ML

CERTIFICATIONS

- AWS Certified Cloud Practitioner
