Backend Data / Software Engineer

SKILLS

- Programming Languages: Python (FastAPI), Java/Groovy (Spring Boot), JavaScript (Next.js), HTML, CSS
- Tools and skills: AWS (S3, Redshift), PostgreSQL, MySQL, Docker, Terraform, Airflow, MinIO, GitLab, Jira, Confluence

WORK EXPERIENCE

Mekong Security Tech / NGS

Hanoi, Vietnam

Backend Software Engineer (in 15-member team)

March 2025 - Dec 2025

- Implemented core API services for the real-time monitoring of illegal activities on social platforms using **Python (FastAPI)**
- Orchestrated asynchronous **microservices** using **Airflow**
- Implemented big data query searches using **Elastic Search**
- Implemented media storage service using **MinIO** (AWS S3 equivalent)
- Extended the existing **PostgreSQL** schema for new services, optimized queries, and led to 120% performance improvement
- Implemented **Redis** cache, which led to an average 60% faster retrieval of frequently used data

Techlead

Hanoi, Vietnam

Backend Java/ Groovy Developer Intern

Jan 2025 - March 2025

- Implemented Odoo-Jira synchronization tool using Java, Groovy (Spring Boot)

Skill4skill

Remote - Toronto, Canada

JavaScript Developer

Oct 2024 - Dec 2024

- Contributed to the architecture and PostgreSQL schema design of an online skill trade platform, implemented using JavaScript (Next.js)

EDUCATION

University of Texas at Austin

Remote

Master of Computer Science (Ongoing)

- Relevant Courses: Parallel Systems

Toronto Metropolitan University

Toronto, Canada

Bachelor of Computer Science (Honors) - Distinction

- Dean's list | Renewable entrance scholarships
- Relevant Courses: Software Engineering, Data Structures, Database Systems, Algorithms, AI, ML

PERSONAL PROJECTS

End-to-End Full-Stack Interactive LMIA Distribution Map

Oct 2024

- **ETL** data from Canada.ca API into MySQL (CSV, JSON, XLSX)
- Created an interactive map using **Flask** and Google Maps API, visualizing LMIA distribution trends
- Added filter features for enhanced data analysis; optimized Bash commands with Make
- Github link: <https://github.com/vietanhphung/lmiaMap>

Automated ETL Data Pipeline for Air Crash Investigation on AWS

Sep 2024

- Scraped and processed air crash data using BeautifulSoup, stored in **AWS S3**
- Built infrastructure with Terraform, orchestrated with **Airflow**, and containerized using **Docker**
- Secured pipeline with AWS IAM policies and simplified Bash commands with Make
- Github link: <https://github.com/vietanhphung/E2E-AirCrashInvestigation>

CERTIFICATE

AWS Cloud Practitioner

Apr 2023
